Ok. Poor choice of words. Not a classic ER then. Certainly real for the residents.

Yeah. The aircard is probably faster much of the time.... In many ways a better use than the satellite.

I know for sure, however, that R6 was doing some video conf recently (freakin Eric).. So that would have slowed it even more.

As for Steve and the plug... I guess. I know it'll be a more stable... But not sure about faster. He would know better than me.

And wait... Dimocks not a "real ER"?

Could've fooled me! :)

I'm sure it feels that way. How are the HQ OSCs doing anyway?

In any event. Glad it got you through. That's the idea... (Relatively) quick get up and go for more than one person.... Until a more permanant space/network is set up.

Have a good weekend.

I thought i'd take a quick second to let you know that the satellite performance on the MCP was ok...but not a fast as my air card is doing right now. I am not sure the issue, since, I don't really think it was because of all the extra users or not. at least at Dimock. As you said, it could have been that other regions are hogging bandwidth.

the lesson learned is that in a "real" ER, I think we would want more bandwidth for sure. in hindsight, i maybe should have asked for that.

anyway,.... no worries... got us through. we are awaiting our hardline Comcast high speed here at our new building.

but I thought you should know that in the interim, I am using my air card, which seems to be faster than the MCP satellite.

p.s. I was using the plug in on the MCP too...which Steve claims gives you a faster speed.

have a good weekend.
